Reporting – next steps

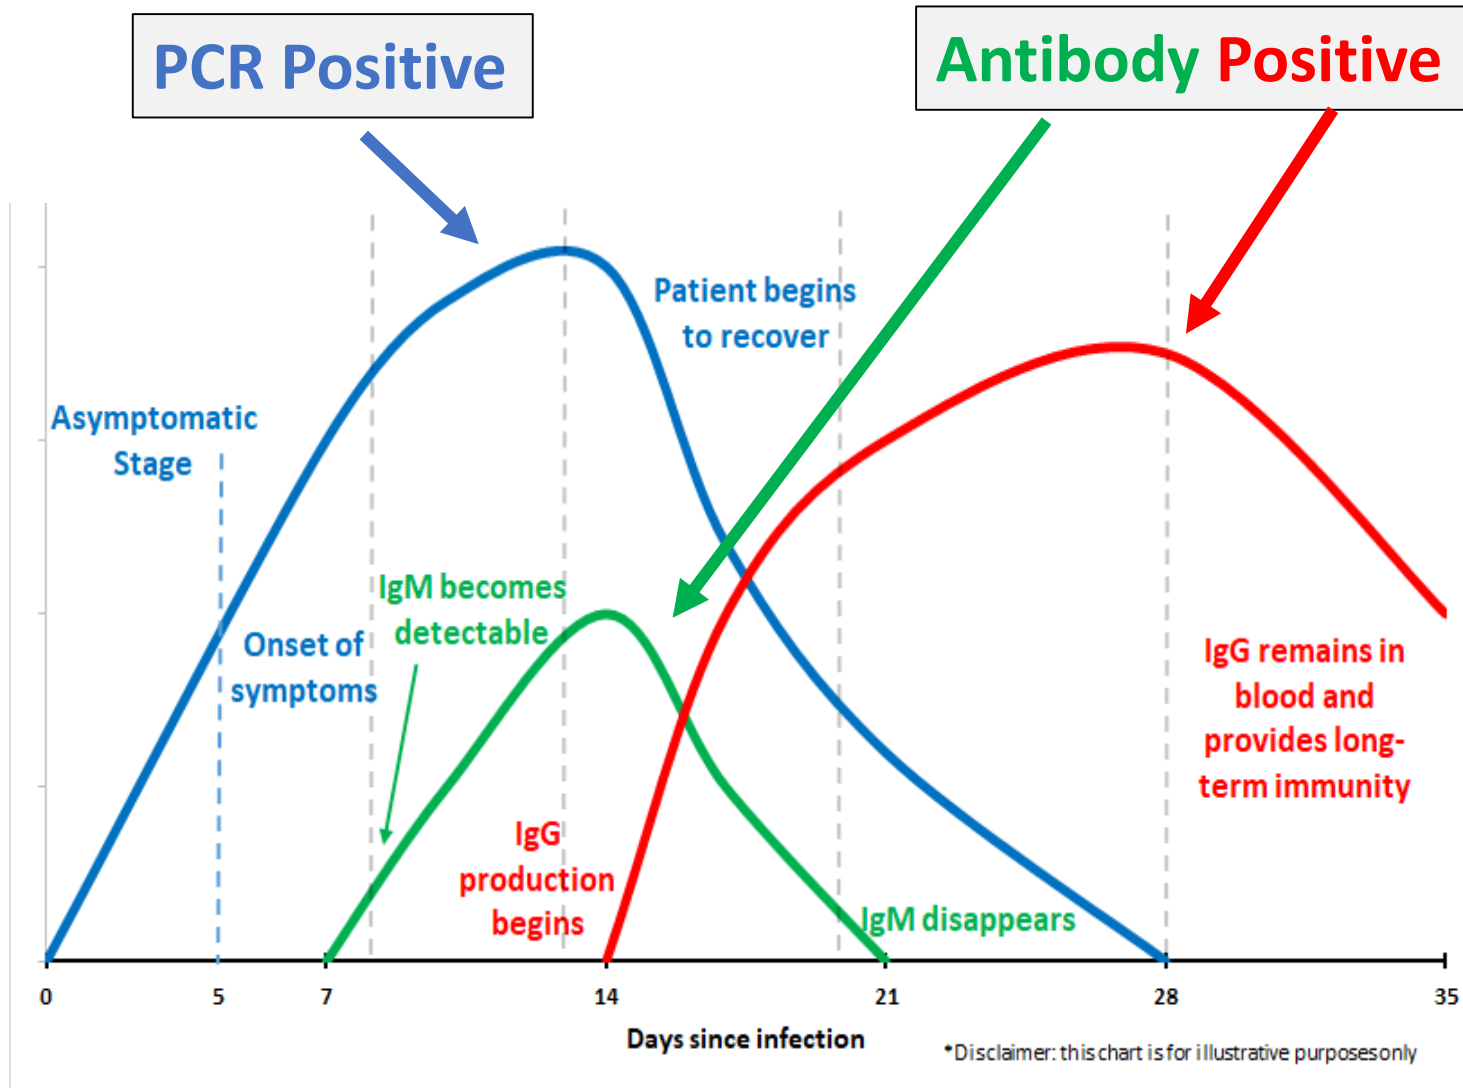

- A document with the charts presented and relevant explanation will be published weekly by Statistic Jersey to provide more details to the public.
- Further reporting is being developed to provide decision-makers and the public with regular information without compromising individual confidentiality.

Testing Update

02 April 2020

Types of testing

- PCR testing detects virus DNA
- Can identify infection before symptoms
- 5,000 kits on order – due mid April
- Serology detects body's response to infection
- 50,000 due by mid April, 100,000 to follow
- Island wide testing programme – starting with frontline workers

Prioritising testing

**Helpline / GP referrals;
Hospital patients, and
workforce**

**Essential workers and
vulnerable groups**

**Island wide testing
programme**
